DETAILED ACTION

Response to Amendment

1. This Office Action is responsive to the Amendment dated 6/22/05.
2. The Amendment filed 6/22/05 successfully overcomes the rejections set forth in paragraphs 1-3 of the Office Action mailed 2/22/05. Accordingly, these rejections are withdrawn.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over US 5,631,753 (US '753). US '753 discloses a black matrix substrate comprising a light shielding layer containing metallic particles inside a photosensitive resin. See the abstract; column 7, lines 4-35; and column 8, line 59 to column 9, line 7. The metal particles are present in an amount such that particles having a diameter of at most 0.05 μm , generally 0.01-0.02 μm , in a light-shielding layer having a thickness of preferably 0.1 to 2.0 μm , result in a light-shielding layer having an optical density of not less than 3.0. See column 9, line 60 to column 10, line 15. These ranges correspond to the particle size, layer thickness, and optical density of the present invention. However, US

Art Unit: 1756

'753 does not teach the amount as a volume fraction of the metal particles of the disclosed size which would result in the disclosed optical density when present in a layer having the disclosed thickness.

It would have been obvious to one skilled in the requisite art to arrive at the volume fraction for the metal fine particles of the present invention, since it has been held that wherein the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges or value of a result effective variable involves only routine skill in the art. *In re Aller*, 105 USPQ 233 and *In re Boesch*, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).

Allowable Subject Matter

4. Claims 4-14 are allowed.

Response to Arguments

5. Applicant's arguments with respect to claims 1-3 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 1756

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
